FOREWORD

The primary purpose of this handbook is to provide officials in the Department of Agriculture with a ready reference for a variety of statistics that are frequently used. The basic data are drawn from the Dominion Bureau of Statistics publications. The data are updated and revised annually in order to maintain their over-all usefulness.

In addition to updating the 1969 handbook, this report also incorporates other changes. The more important of these are as follows:

- (1) In general, the handbook has been expanded by including more tables and by incorporating more detail in some existing tables.
- (2) The number of years of data carried in each table is generally reduced. However, the years included have been selected with the view of maximum comparability between data in the different tables and to provide a historical perspective to the series.
- (3) For census data, the census years 1941, 1951, 1956, 1961 and 1966 are carried. This gives historical perspective to the data from a date early in the second world war.
- (4) For non-census data, in addition to 1951, 1956, 1961 and 1966, the period 1935-39, the year 1949 and generally the current data for the years 1967 to 1970 inclusive, are also carried. The 1935-39 period is included to extend the historical perspective for non-census data to the immediate pre-war period. In this respect, it is similar to and replaces the year 1941 in the census data. The year 1949 is included because it is one of the important statistical base periods in the immediate post-war years.

Dr. D.H. Plaunt,
Director,
Farm Management Division,
Economics Branch,
Canada Department of Agriculture.

SECTION 1 - CENSUS DATA - TABLES 1 - 25

Population

The "farm" population comprised all persons living on a census farm, regardless of their occupation. The same definition applied to all censuses, 1951, 1956, 1961 and 1966.

Definition of a Farm

In the 1941 census a farm was defined as all the land located in one municipality or census subdivision which was directly farmed by one person conducting agricultural operations either by his own labor or with the assistance of members of his household or with hired help. A farm could consist of a single tract of land or a number of separate tracts held under the same or different tenures so long as the total area was one acre or more in extent and had agricultural production in 1940 valued at \$50 or more. For purposes of the 1951 census, a farm was defined to be three acres or more in size or one to three acres in size with agricultural production in 1950 of a value of \$250 or more. Where a farm consisted of a number of parts all of which were not situated in the same municipality the census reported the complete farm as one unit in the municipality where the headquarters were located. In the 1961 and 1966 censuses, a farm was defined as an agricultural holding of one acre or more with sales of agricultural products during the previous 12 months of \$50 or more. The headquarters rule applied as in 1951.

The number of farms in Canada was 732,858 in 1941, according to the then prevailing census definition of a farm; this number would come down to 677,500 if the 1951 definition had been used. In 1961 the number of farms was 480,903 on the basis of the 1961 census definition; had the 1951 definition been used, this figure would have been increased by 40,731. In 1966, the number of farms totaled 430,522. Farms, for census purpose, obviously include some units that do not correspond to what is commonly considered to be a farm.

^a Figures for 1956 not available.

^b Components do not necessarily sum to totals because of roundings.

^c Automobiles and motor trucks are included in this category.

^d From 1967 figures for livestock and poultry, includes value of animals on fur farms: calculated from the Quarterly Bulletin of Agricultural Statistics, Cat. No. 21-003, April to June 1970, Dominion Bureau of Statistics.

^e Includes Newfoundland, and the Yukon and Northwest Territories.

^f Excludes Newfoundland, and the Yukon and Northwest Territories.

^g Excludes Newfoundland.

^a Average 1935-39 live weights. Average annual price of Grade A hogs, dressed weight, at Toronto, excluding premiums. Effective 1969 Grade A hogs, replaced by Index 100.

^b Average annual price of choice slaughter steers, live weight, at Toronto. The average price for the average 1935-39 is the simple average of the price for steers over 1,050 pounds and the price for steers under 1,050 pounds. The average annual price from 1949 to 1957 is the simple average of the price for steers over 1,000 pounds and the price for steers under 1,000 pounds. From 1958 to 1970, the prices are weighted averaged for all weights of steers.

^c Average annual price to producers of Grade A chicken, live weight, at Toronto. From 1949 to 1956, the prices refer to chickens weighing less than 3 pounds; from 1957 to 1963, chickens weighing less than 4 pounds; from 1964 to 1970 chickens less than 5 pounds.

^d Average annual price to producers for all grades at registered grading stations in Canada, weighted by grade for each province.

SECTION 5 - FARM CASH RECEIPTS - TABLES 34 - 35

SECTION 6 - FARM EXPENSES - TABLES 36 - 40

SECTION 7 - FARM INCOME - TABLES 41 - 44

Farm Income

Farm Cash Receipts

Farm cash receipts include all cash receipts from the sales of farm products including Canadian Wheat Board participation payments on previous years' grain crops, net cash advances on farm-stored grain in Western Canada and deficiency payments made by the Agricultural Stabilization Board.

Net Income

Net income is the sum of farm cash receipts from the sales of farm products, income in kind and federal government supplementary payments, less operating expenses and depreciation charges. It is adjusted for inventory changes.

Income in Kind

This item represents the value of farm consumption of home-grown foodstuffs, wool and forest products plus an imputed rental value for the farm dwellings. The farm products consumed on the farm are valued at the price the farmer would have received had they been sold.

Supplementary Payments

These include payments made under the provisions of the Prairie Farm Assistance Act, the Western Grain Producers' Acreage Payment Plan, the Prairie Farm Income Plan, the Wheat Acreage Reduction Program, and payments made to Prince Edward Island potato growers in connection with losses as a result of fusarium rot in the 1960 potato crop.

Farm Expenses

These include the outlays made by farmers for the operation of the farm business regardless of whether they are paid for in cash or accumulated as new debt. Expenditures for goods and services obtained from other farmers are excluded. All subsidy payments are taken into account so that the estimates of expenditure represent only the net amounts paid by farmers.

SECTION 8 - FOOD CONSUMPTION AND RELATED DATA - TABLES 45 - 51

Food Consumption

Apparent per capita food consumption is calculated by dividing the amount of food available for domestic consumption by the total population.

To arrive at the amount of food available for domestic consumption, annual balance sheets are prepared showing supplies and disposition of each food. The supply of a commodity is determined by adjusting production figures to take into account exports, imports, changes that take place in processing, inventory changes and losses due to wastage and shrinkage. Deductions are also made for non-food uses.

This method only estimates the supply of food available to be consumed not the actual consumption, therefore, it is called apparent per capita consumption.
